			MAIL DATE 05/15/2007	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No.		Applicant(s)	
	09/678,414		CARLSON, DAVID W.	
	Examiner		Art Unit	
	Brook Kebede		2823	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 March 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 31-52 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 31-41 is/are allowed.
- 6) ☒ Claim(s) 42-52 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Art Unit: 2823

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 2, 2007 has been entered.

Status of the Claims

2. Claims 31 - 52 are now pending in the application.

Specification

3. The disclosure is objected to because of the following informalities:

Applicants cancel entire "Summary of the Invention" via through amendment filed on August 24, 2006. However, Summary of Invention requires a set forth 37 CFR § 1.73.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. **Claims 42-47, 49 and 50 are rejected under 35 U.S.C. 102(e) as being anticipate by Li et al. (US/6,162,368).**

Art Unit: 2823

Re claim 42, Li et al. disclose method of planarizing a layer of semiconductor material formed on a wafer, the wafer having a top surface, the top surface having a first region and a second region that lies above the first region, the method comprising: conformally forming a layer of first material (16) to contact the top surface of the pressed wafer, the layer of first material (16) having a top surface, the top surface of the layer of first material having (16) a first region and a second region that lies above the first region of the layer of first material; forming a layer of second material (18) to contact the top surface of the layer of first material (16); and performing a chemical-mechanical polish of the layer of second material (18) and the layer of first material, the chemical-mechanical polish continuing until the layer of second material has been substantially all removed from the layer of first material (16), thereby forming the layer of first material to have a substantially planar top surface (see Fig. 2D), the substantially planar top surface of the layer of first material lying over the first region and the second region of the top surface of the wafer (see Figs. 2A-2I and Col. 4, line 37 through Col. 6, line 54).

Re claim 43, as applied to claim 42 above, Li et al. disclose all the claimed limitations including the limitation wherein the substantially planar top surface of the layer of first material has a first thickness over the second region of the top surface of the wafer, and the layer of first material is formed such that the first lower level region of the top surface of the layer of first material, lies above the second region of the top surface of the wafer by a second thickness that is equal to or greater than the first thickness (see Figs. 2A-2I and Col. 4, line 37 through Col. 6, line 54).

Re claims 44 - 47, as applied to claim 42 above, Li et al. disclose all the claimed limitations including the limitation wherein the layer of first material is conductive layer (i.e.,

Art Unit: 2823

doped polysilicon which is doped prior forming the second material) and electrically connected to the device on wafer and the second material is non-conductive (i.e., substrate) (see Figs. 2A-2I and Col. 4, line 37 through Col. 6, line 54).

Re claim 49 and 50, as applied to claim 42 above, Li et al. disclose all the claimed limitations including forming a layer of third material (i.e., also mask layer) on the planarized layer of material (see Figs. 2A-2I and Col. 4, line 37 through Col. 6, line 54).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. **Claim 48 is rejected under 35 U.S.C. 103(a) as being unpatentable over Li et al. (US/6,162,368), as applied in Paragraph 5 above, in view of Weling et al. (US/5,378,318).**

Re claims 48, as applied to claim 42 in Paragraph 5 above, Li et al. disclose all the claimed limitations including using CMP process with a slurry that has a predetermined etch rate.

However, Li et al. do not specifically disclose the etch selectivity of the first material to the second material approximately same rate (i.e., being 0.9-1.1:1).

Weling et al. disclose CMP of the first material (21) and second material (23) with a etch selectivity of 1:1, (i.e., approximately same rate) (see Fig. 1, Col. 7, lines 6-11).

Art Unit: 2823

Both Li et al. and Weling et al. teachings are directed to CMP process in order to planarize a material for semiconductor device fabrication. Therefore, the teachings Li et al. and Weling et al. are analogous

Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant(s) claimed invention was made to provide Li et al. reference with etch selectivity ratio 1:1 as taught by Weling et al. because in order to polish the first layer and second layer at the same rate and form planar surface for the fabrication of semiconductor device.

8. **Claim 51 and 52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Li et al. (US/6,162,368), as applied in Paragraph 5 above, in view of Sandhu et al. (US/5,381,302).**

Re claim 51, as applied to claims 49 in Paragraph 5 above, Li et al. disclose all the claimed limitations including the planarized layer of material includes doped polysilicon.

Although it is well-known in the art to deposit metallic layer that forms silicide sheet resistance of the polysilicon layer, Li et al. do not specifically disclose that layer of third material lowers a resistance of doped polysilicon (see Figs. 2A-2I and Col. 4, line 37 through Col. 6, line 54).

Sandhu et al. disclose a method of fabricating a semiconductor device the method includes forming a doped polysilicon (65) in the opening (50) and polishing of the doped polysilicon (65) (see Figs. 4 and 5) and forming metallic layer (62) (i.e., Ti layer that lowers resistance of the doped polysilicon layer) in order to form titanium silicide layer (67) (see Fig. 7 and related text in Col. 5, line 10 -67) that lowers the sheet resistance of the polysilicon layer.

Art Unit: 2823

Both Li et al. and Sandhu et al. teachings are directed to CMP process in order to planarize a polysilicon material for semiconductor device fabrication. Therefore, the teachings Li et al. and Sandhu et al. are analogous

Therefore, it would have been obvious to one having ordinary skill in the art at the time of applicant(s) claimed invention was made to provide Li et al. reference with depositing of Ti based material layer over the doped polysilicon layer Sandhu et al because titanium is a known material in the art reducing the sheet resistance of the doped polysilicon layer by silicidation process.

Re claim 52, as applied to claim 51 above, Li et al. and Sandhu et al. in combination disclose all the claimed limitations including forming a mask on the layer of third material (i.e., Sandhu et al. use the mask by keeping the titanium over the polysilicon plug while removing the titanium layer on the portion the ILD layer, as depicted on Fig. 8).

Allowable Subject Matter

9. Claims 31-41 are allowed over prior art of record.

10. The following is a statement of reasons for the indication of allowable subject matter:

Applicant's arguments (see Applicant's arguments of the March 2, 2007 response in Page 12) with respect to claim 31 is persuasive because the prior art of record neither anticipates nor renders obvious the claimed subject matter of the instant application as a whole either taken alone or in combination, in particular, prior art of record does not teach "the first region of the top surface of the layer of second material lying above the second region of the top surface of the layer of first material," as recited in claim 31.

Art Unit: 2823

Claims 32-41 are also allowed as being directly or indirectly dependent of the allowed independent claim.

Response to Arguments

11. Applicant's arguments with respect to claims rejection under 35 U.S.C. § 112 first Paragraph is found persuasive. Accordingly, the Examiner withdraws the rejection.

12. Applicant's arguments filed on March 2, 2007 with respect to claims 42-52 have been fully considered but they are not persuasive.

Applicant further argued that "As shown Fig. 2C, Li teaches the native oxide layer 18, *the second material*, has been removed, from polysilicon 16, the first material, but Li totally fail to teach or suggest that the polishing continues until substantially all the native oxide layer 18 has been removed at which time polysilicon layer 16 has a substantial planar top surface as required by claims..."

In response to the applicant's argument, it is respectfully submitted that Li et al. '368 disclose all the claimed limitations the instant application as claimed in claims 31-36, 38-46 and 49-52 as applied above. For example, as shown in Fig. 2D and presented herein below, the first material layer 16 does actually polished to have planar surface prior layer 50b, 106 and 104 are deposited. The removal of the second material layer 18 and planarizing of the second material 16 is happened concurrently within short period of time by CMP process (see also Col. 6, lines 1-5). In addition, with respect to applicant's argument, it is not clear how could be possible that polishing of layer 16 with out removing of layer 18.

FIG. 2D

After the CMP process and removal of the material layer 18, the first material layer 16 having a substantially planar surface 19 as shown in Fig. 2G herein below.

FIG. 2G

Further in response to applicant's contention, it is respectfully submitted the instant application claimed invention does not specifically disclose to the degree of certainty that instant application CMP process will result a perfect planar surface that cannot be achieved by the CMP process of Li et al. '368. There is no evidence can be found in the instant application to the contrary of Li et al. '368 disclosure.

Applicant further argues that "Li fails to teach or suggest formation of third material as claimed ..."

In repose to applicant's argument, it is respectfully submitted that Li et al. '368 disclose all the claimed limitations of the instant application as claimed including forming of third material over the planarized second material 16. For example, Fig. 2I as shown below material layer 114 is meets the claim language third material layer as applied in the rejected claims in Paragraph 4 above.

FIG. 2I

Further in response to applicants contention that "*Li does not teach or suggest* wherein the third layer is a mask *layer ...*," it is respectfully submitted that "mask" layer does not have any special meaning as claimed in claims 39 and 50 because applicant does not define what the mask layer entails or represent in terms of it function and usage. Since "mask" has a very broad interpretation and function in the semiconductor industry, the "pad" layer is analogous to "mask" for CMP process. In addition based on the plane interpretation of the "mask" and examining of applicants evidence in Appendix "C", it is respectfully submitted examiner's interperation is proper to consider the pad layer as a "mask" because the invention CMP process and "pad" layer used as mask during CMP process in the art. With function and/or meaning of "mask" in the instant application, it is interpreted that Li et al.'s "pad" layer meets the scope and meaning of "mask". *"See In re Paulsen, 30 F.3d 1475, 1480, 31 USPQ2d 1671, 1674 (Fed. Cir. 1994).*

Art Unit: 2823

inventor may define specific terms used to describe invention, but must do so “**with reasonable clarity, deliberateness, and precision**” and, if done, must “**set out his uncommon definition in some manner within the patent disclosure**” so as to give one of ordinary skill in the art notice of the change” in meaning) (*quoting Intellicall, Inc. v. Phonometrics, Inc.*, 952 F.2d 1384, 1387-88, 21 USPQ2d 1383, 1386 (Fed. Cir. 992)). Any special meaning assigned to a term “must be sufficiently clear in the specification that any departure from common usage would be so understood by a person of experience in the field of the invention.” *Multiform Desiccants Inc. v. Medzam Ltd.*, 133 F.3d 1473, 1477, 45 USPQ2d 1429, 1432 (Fed. Cir. 1998). See also *Process Control Corp. v. HydReclaim Corp.*, 190 F.3d 1350, 1357, 52 USPQ2d 1029, 1033 (Fed. Cir. 1999).”

Furthermore, the rejected claims do not specifically claim the type of material and process step such a way can be distinguishable from Li et al. ‘368 disclosure. In this regard, claims are given their broadest reasonable interpretation in light of the supporting disclosure. See *In re Morris*, 127 F.3d 1048, 1054-55, 44 USPQ2d 1023, 1027-28 (Fed. Cir. 1997). Limitations appearing in the specification but not recited in the claim are not read into the claim. See *In re Prater*, 415 F.2d 1393, 1404-05, 162 USPQ 541, 550-551 (CCPA 1969). See also *In re Zletz*, 893 F.2d 319, 321-22, 13 USPQ2d 1320, 1322 (Fed. Cir. 1989).

As shown above, the rejection under 35 U.S.C. §102(e) is deemed proper and the rejection under 35 U.S.C. §103(a) also deemed proper and the *prima facie* case of obviousness has been met.

Conclusion

13. **THIS ACTION IS MADE NON-FINAL.**

Art Unit: 2823

Correspondence

14. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brook Kebede whose telephone number is (571) 272-1862. The examiner can normally be reached on 8-5 Monday to Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Matthew S. Smith can be reached on (571) 272-1907. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
